PROFILE

BSc (Hons) in Computer Science graduate with practical experience developing software applications, machine learning solutions, and cross-platform mobile applications. Proficient in Python, C#, .NET, object-oriented programming, software testing, and version control using Git. Demonstrated ability to analyse problems, develop effective technical solutions, and apply software engineering principles through academic and project-based work. Combines strong analytical thinking, attention to detail, and communication skills with a proactive approach to learning new technologies.

CORE EXPERTISE

Python | C# | .NET MAUI | Java | SQL | Git | Machine Learning | Data Analysis | Software Testing | Debugging | API Integration | Mobile Development | Database Management | Problem Solving | Agile Working | Technical Documentation | Team Collaboration | Analytical Thinking | Time Management

EDUCATION

BSc (Hons) Computer Science (Pass) | Manchester Metropolitan University Sep 2021 – May 2024

Selected Modules: Software Engineering, Web Development, Database Systems, Computer Networks, Artificial Intelligence

SELECTED PROJECTS

Music Recommendation System (Python, scikit-learn) | 2024

- Engineered a machine learning recommendation engine trained on a dataset of 10,000+ songs, enabling personalised music suggestions based on user preferences and song characteristics.
- Improved recommendation accuracy by implementing robust data preprocessing, feature engineering, and model optimisation techniques throughout the development lifecycle.
- Validated model effectiveness through testing and evaluation, achieving strong predictive performance and positive peer feedback.
- Applied data-driven problem-solving and machine learning methodologies to transform large datasets into meaningful user recommendations.

Cross-Platform Mobile Application (C#, .NET MAUI) | 2024

- Developed a fully functional cross-platform mobile application using C# and .NET MAUI, delivering a responsive and intuitive user experience across multiple devices.
- Enhanced application maintainability by implementing modular architecture and software engineering best practices, improving scalability and code quality.
- Optimised application performance by identifying, troubleshooting, and resolving bugs through structured testing and debugging processes.
- Streamlined project development through effective use of Git version control, supporting code management and collaborative development workflows.
